

## How to Forget a Wireless Connection in iOS

Here are the steps to forget the connection settings for a wireless connection in iOS.

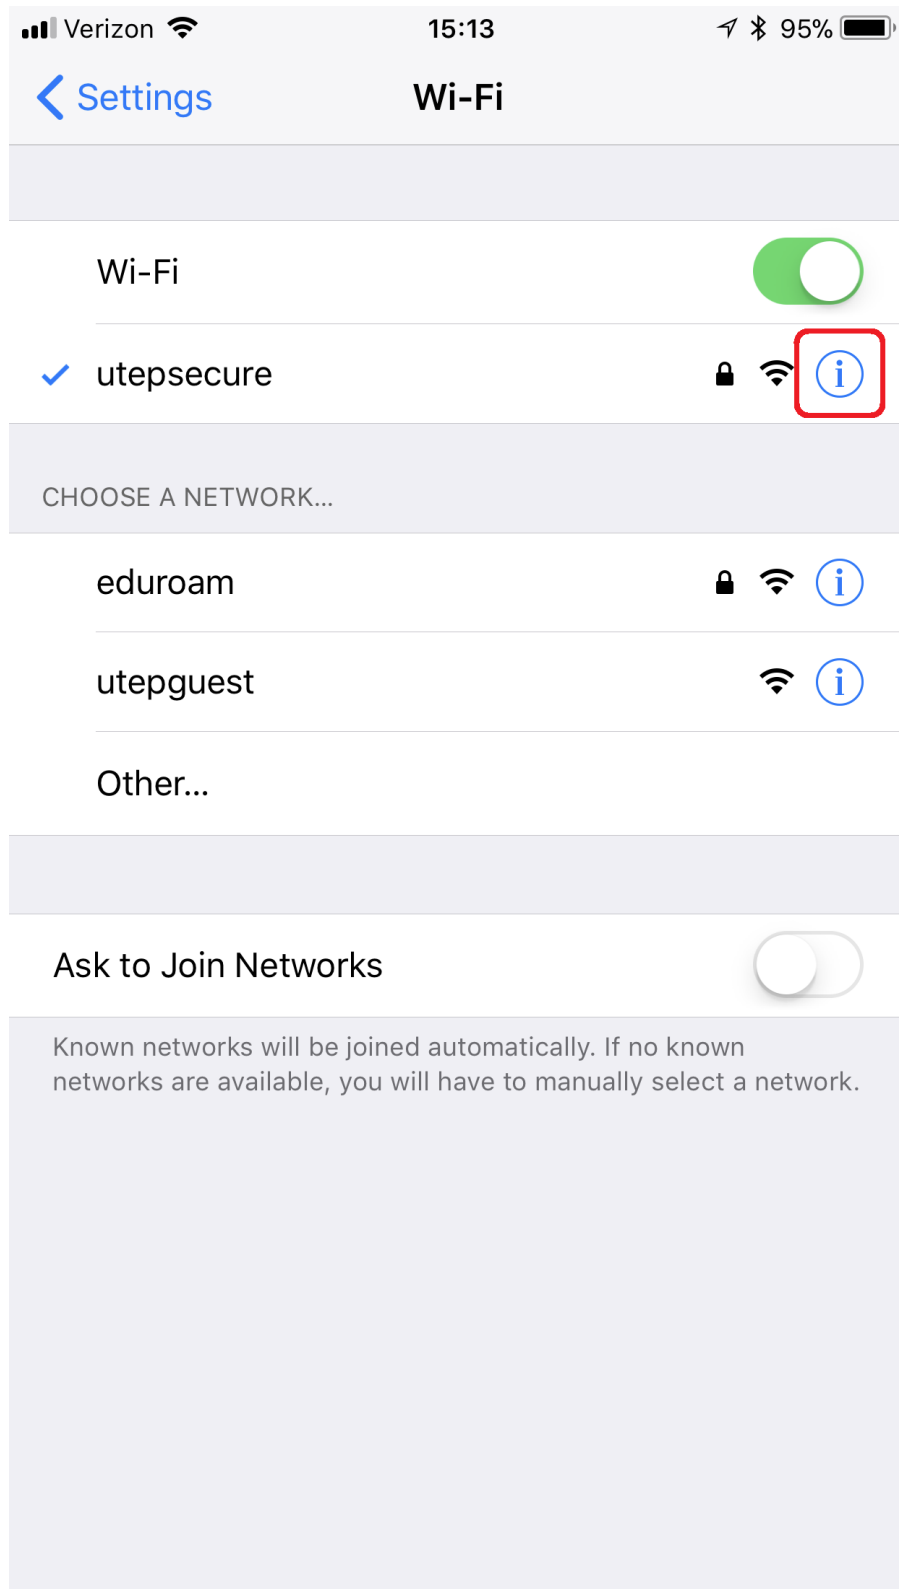

1. First, open the **Settings** window in iOS.

2. Then enter the wireless settings section by tapping on **Wi-Fi**.

3. Under the wireless settings, choose the network that you want to forget. For UTEP's wireless network, the network name should be **utepsecure**. Tap on the 'i' button next to the network name to select it.

- Once the settings window for the connection opens, tap on Forget This Network, then confirm by selecting Forget. You may need to restart the iOS device to complete this process.
