

# Practicum Goals

REHC 5390- Practicum in Rehabilitation

## *Goals and Objectives*

Students are encouraged to develop goals and objectives for Practicum which should be laid out in an outline format and must be observable and measurable. A goal is what you plan to accomplish and objectives are the step you plan to take to achieve the goal. Areas you might include in your planning document include: (a) learning about the agency and its procedures; (b) learning about the community context and resources; (c) developing an awareness of multicultural issues in your community; (d) developing specific counseling skills; or (e) developing professional identity and behavior. You are not restricted to these areas as there might be other issues you would like to address during your Practicum training.

The finalized goals and objectives will be signed following the first site visit by the student, the site supervisor, and the university supervisor. (Note: Please be sure to provide an adequate number of spaces for the appropriate signatures!)
