Are you ready to learn how to lead teams, manage complex projects and make a difference in today's global construction industry?

Online Graduate Certificate in Construction Management

UTEP's online Graduate Certificate in Construction Management is designed for working professionals and students who want to add to their construction management knowledge and handle projects of all sizes with confidence.

The 15-semester credit hour certificate allows aspiring professionals who are limited by time constraints the opportunity to acquire core knowledge in the key areas of construction management. The certificate culminates in an internship which gives students hands-on experience. It is also a great option for students with backgrounds in engineering, business or architecture who want to get a basic knowledge of construction management. The certificate can also provide a path to a master's degree; credits earned may be transitioned into a master’s degree program in construction management.

Applicants are generally expected to have a bachelor’s or master’s degree in engineering, architecture, business or physical science; students with other backgrounds may be considered if they have construction experience that is acceptable to the department.

Connect with Your Full Potential
With a graduate certificate in construction management, you can
- Get an understanding of the basic knowledge required to oversee complex projects of all sizes
- Learn the basics of managing the processes and logistics of construction jobs
- Estimate costs, maintain a budget, work in teams and secure material resources and control finances
- Develop an understanding of job site safety and construction law
- Become an effective project manager
- Gain exposure to industry and work on “real” jobs for customers during the internship
- Apply the graduate certificate to a master’s degree in construction management
