CURRICULUM PROPOSAL

APPROVAL PAGE

Proposal Title: Breaking PHYS 2420 & 2421 into separate lecture/seminar & labs

College: COS  Department: Physics

DEPARTMENT CHAIR- Mark Pederson

I have read the enclosed proposal and approve this proposal on behalf of the department.

[Signature]

October 31, 2021

COLLEGE CURRICULUM COMMITTEE CHAIR – Nancy Marcus

I have read the enclosed documents and approve the proposal on behalf of the college curriculum committee.

[Signature]  11/1/2021

Date

COLLEGE DEAN – Robert Kirken

I have read the enclosed documents and approve the proposal on behalf of the college. I certify that the necessary funds will be allocated by the college in support of this proposal.

[Signature]  11/1/2021

Date
In order to better reflect the fact that our introductory calculus-based physics courses are actually taught as a lecture/seminar and separate laboratory, we propose breaking PHYS2420 (Introductory Mechanics) a combined lecture/seminar and laboratory course into PHYS 2320 (Introductory Mechanics) a separate lecture/seminar course to be taken along with PHYS 2120 (Laboratory for PHYS 2320) a separate laboratory course. The content of both courses will be identical to the content that existed when both courses were combined. Similarly we propose breaking PHYS2421 (Introductory Electromagnetism) a combined lecture/seminar and laboratory course into PHYS 2321 (Introductory Electromagnetism) a separate lecture/seminar course to be taken along with PHYS 2121 (Laboratory for PHYS 2321) a separate laboratory course. The content of both courses will be identical to the content that existed when both courses were combined. In addition to this splitting better reflecting the actual structure, it will also better meet the needs of students who fail one course but pass the other. It will also better meet the needs of transfer students and physics majors as it affords the department with the flexibility needed to develop modern experiential learning protocols.

The Curriculum Director has said that a report will be run to identify all programs that include these courses so we can update the degree plans.
Dear Nancy,

The physics department voted today to authorize splitting 2420, 2421, 1404, and 1403. The faculty voted 15-1 to split the courses. As chair of the department, I am also in favor of this decision. All faculty members and Sergio Flores were present.

I guess we now need to understand the process and timeline for implementation.

Thanks,
Mark

Mark R Pederson, PhD FAPS
Professor and Chairman
Dr. C. Sharp Cook Chair of Physics
Department of Physics, PSCI 209A
The University of Texas at El Paso
500 W. University Ave.
El Paso, TX 79968
Office: 915-747-8869
www.utep.edu/science/physics
University of Texas at El Paso
PHYS 2420 Introductory Mechanics
(CRN: 12702)

Term: Fall 2021
Lecture: TR 12:00 pm – 1:20 pm
Location: PSCI 115

Prerequisites: MATH 1411 may be taken concurrently

Instructor: Luis Basurto
Office: Physical Science Building 215-A
E-mail: lbasurto3@utep.edu
Office hours: MW 12:00PM-1:00PM

Lab Coordinator: Karla Carmona
Office: Physical Science Building 317
E-mail: kcarmona@utep.edu

Grading Policy:
In-class exams 45% (3 exams)
Homework 10%
Final 20%
Quizzes 10%
Lab 15%

Objectives:
In accordance with the UTEP Catalog, in this course you will learn dynamics of particles and rigid bodies using vectors and calculus, conservation of energy and momentum, and kinetic theory. These concepts are foundational in the physical sciences and many branches of engineering and if you are taking this class, chances are you will continue to apply these concepts in the rest of your college career and in your professional career. Putting some effort into this class will pay off.

1) You will learn about several physical concepts, how they are connected to each other, and how they are used in the real world. This will happen mostly in lecture.

2) You will learn how to setup and solve problems applying concepts and models learned in class. This will happen mostly in the recitations and by doing homework problems.

3) You will learn to think scientifically about the world and apply ideas from the class to both experiments and current events. This will happen mostly in lecture and in the lab.
The class will follow the textbook, and homework problems will come from the problems at the end of the chapters and as such, renting or buying the textbook is encouraged, but access to the mastering physics website is required. Download the registration instruction sheet from Blackboard to register.

Exams:
There will be 3 in-class exams, each covering 4 chapters. Although the material tested on the exams is not cumulative, new concepts in physics are built on previous ones.

Final:
The final exam will be a comprehensive exam.

Lab:
The lab is independent of the class, but there is synergism. Karla Carmona is the Lab Coordinator.

Students with Disabilities:
If you have a disability and need classroom accommodations, please contact The Center for Accommodations and Support Services (CASS) at 747-5148, or by email to cass@utep.edu, or visit their office located in UTEP Union East, Room 106. For additional information, please visit the CASS website at https://www.utep.edu/student-affairs/cass/. Accommodations might include but are not limited to note takers, readers, or extended time on exams and assignments. Please take care of this as soon as possible and before the first exam.

Military statement: Students being called for military duties need to contact the instructor as soon as possible.

Academic dishonesty:
It will be though to cheat on this class. The main opportunity is to lie regarding which homework problems you have solved, but if you are asked to the board and evidently lied about you solving the problem, we will have a conversation. Science is incompatible with cheating, don’t do it.
Course overview

Ch.  1 Concepts of Motion
Ch.  2 Kinematics in One Dimension
Ch.  3 Vectors and Coordinate Systems
Ch.  4 Kinematics in Two Dimensions
Ch.  5 Force and Motion
Ch.  6 Dynamics I: Motion Along a Line
Ch.  7 Newton's Third Law
Ch.  8 Dynamics II: Motion in a Plane
Ch.  9 Work and Kinetic Energy
Ch. 10 Interactions and Potential Energy
Ch. 11 Impulse and Momentum
Ch. 12 Rotation of a Rigid Body

### Course Title:
Introductory Electromagnetism

### Credit Hrs:
4.0

### Term:
Fall 2021

| Course Meetings & Location: |
| MW 12:00 – 1:20 p.m. |
| Lectures and workshops online, exams on campus |

### Prerequisite Courses:
- 

### Instructor:
Dr. Chunqiang Li

### Office Location:
PSCI 221E

### Contact Info:
Phone #: (915) 747-7537
E-mail: cli@utep.edu
Fax #: (915) 747-5447

### Office Hours:
Monday 11am-12pm, or by appointment

### Final Exam:
Friday, December 10th 2021, 1:00-3:45 pm

### Safety Rules:
Please stay home if you have been diagnosed with COVID-19 or are experiencing COVID-19 symptoms. If you are feeling unwell, please let me know as soon as possible, so that we can work on appropriate accommodations. If you have tested positive for COVID-19, you are encouraged to report your results to covidaction@utep.edu, so that the Dean of Students Office can provide you with support and help with communication with your professors. The Student Health Center is equipped to provide COVID-19 testing.

The Center for Disease Control and Prevention recommends that people in areas of substantial or high COVID-19 transmission wear face masks when indoors in groups of people. The best way that Miners can take care of Miners is to get the vaccine. If you still need the vaccine, it is widely available in the El Paso area, and will be available at no charge on campus during the first week of classes. For more information about the current rates, testing, and vaccinations, please visit epstrong.org.

### Course Delivery:
1. I will give live lectures on Blackboard at scheduled times, i.e. MW 12-1:20 pm. These sessions will be recorded.
2. TAs will give workshops and quizzes at scheduled times.

### Textbook(s), Materials:
Please try to complete the weekly reading before lecture. Lectures will be more effective and you will be ready to ask questions on topics that may have not been clear from the reading.
### Course Objectives (Learning Outcomes):

This semester you will be learning about the amazing world of electricity and magnetism and it all revolves around the physical property known as “charge”. A simple way to think about EVERYTHING you will learn in this course is that you will learn about 1) stationary charges, 2) flowing charges (moving together with more or less constant velocity), 3) accelerating charges. Also you will learn the coupling between electricity and magnetism, which induces electromagnetic waves!

**Home work**

Supplementary reading, answering questions, and solving problems will be assigned in advance in the lecture. Also, our textbooks come with problems at the end. Homeworks will be assigned after each chapter.

It is essential that students become well versed in problem solving methods, which means developing the writing skills to set up a problem, including diagrams and mathematical manipulation to achieve the final answer. A numerical score will be assigned for each homework set based on graded and counted problems.

Feel free to form study groups with your classmates and seek help from any lecture instructor during his or her office hours as you attempt to solve the problems. Make sure that you understand the solutions and write them up yourself. There is a strong correlation between homework scores and exam scores!

**Exams**

Exams will consist of problems very similar to the worked example problems in the text and the assigned homework problems. Exams will be strictly closed-book. You should bring with you a pocket calculator to work out the answers to numerical problems: make sure the battery is charged!

No cell phones allowed in the exams!

Full credit on exams will be awarded for complete solutions including drawing a figure and deriving necessary relations if appropriate, and for numerically accurate answers with units. Partial credit may be given for correct derivations if the answer is numerically incorrect due to arithmetic errors. No credit will be given for relations written down at random or for numerical answers that are not supported by a reasonably complete derivation.

The best way to prepare for the exams is to study the example problems and work out the assigned homework problems regularly. You should work as many additional problems from the text as you can: this is the best way to ensure your understanding of the material.

| Civility Statement: | • Cell phones and pagers should be turned off during class time.  
|                   | • When absences occur, it is your responsibility to obtain handouts and notes from your peers. When possible you will complete the activities you have missed.  
|                   | • Academic integrity is to be practiced at all times.  |
| Disability Statement: | If you have a disability and need classroom accommodations, please contact the Center for Accommodations and Support Services (CASS) at 747-5148, or by email to cass@utep.edu, or visit their office located in UTEP Union East Building, Room 106. For additional information, please visit the CASS website at www.sa.utep.edu/cass.  
|                  | The student is responsible for presenting to the instructor any accommodation letters and instructions.  |
| Military Statement: | If you are a military student with the potential of being called to military service and/or training during the course of the semester, you are encouraged to contact the instructor at the beginning of the semester.  |
| Recruitment of Note-Taker | The Center for Accommodations and Support Services (CASS) provides services for students with disabilities. Some students can benefit from Peer Note Takers. If you are a good note taker and are interested in earning a stipend of $100 for being a Note-Taker for the semester, please log into http://cassportal.utep.edu to sign up. Help a fellow student in being successful at UTEP, do not forget to include your Note Taker assignment in your resume.  |
## Course Tentative Schedule

**Instructions:** PHYS 2421, Instructor: Chunqiang Li

| Week 1 Readings | In preparation for Week 1’s objectives, please read the following course materials.  
|                | • Ch 22 Electric Charges and Forces |
| Week 2 Readings | In preparation for Week 2’s objectives, please read the following course materials.  
|                | • Ch 23 Electric Field (part)  
|                | • Field models and some examples |
| Week 3 Readings | In preparation for Week 3’s objectives, please read the following course materials.  
|                | • Ch 23 Electric Field (part)  
|                | • Parallel plate capacitor |
| Week 4 Readings | In preparation for Week 4’s objectives, please read the following course materials.  
|                | • Ch 24 Gauss’s law |
| Week 5 Readings | In preparation for Week 5’s objectives, please read the following course materials.  
|                | • Ch 25 Electric Potential (part)  
|                | • Electric potential energy |
| Week 6 Readings | In preparation for Week 6’s objectives, please read the following course materials.  
|                | • Ch 25 Electric Potential (part)  
|                | • Electric potential of several examples |
| Week 7 Readings | In preparation for Week 7’s objectives, please read the following course materials.  
|                | • Ch 26 Potential and Energy  
|                | • Prepare for midterm exam 1 (Ch 22-26) |
| Week 8 Readings | In preparation for Week 8’s objectives, please read the following course materials.  
<p>|                | • Midterm exam 1 Ch 22-26 |</p>
