How to Forget a Wireless Connection in iOS

Here are the steps to forget the connection settings for a wireless connection in iOS.

1. First, open the **Settings** window in iOS.
2. Then enter the wireless settings section by tapping on **Wi-Fi**.
3. Under the wireless settings, choose the network that you want to forget. For UTEP’s wireless network, the network name should be `utepsecure`. Tap on the ‘i’ button next to the network name to select it.
4. Once the settings window for the connection opens, tap on Forget This Network, then confirm by selecting Forget. You may need to restart the iOS device to complete this process.
