Introduction

The following lists are of Southwestern native trees, shrubs, perennials, short-lived plants (annuals, biennials, and some perennials), grasses, and succulents/semi-succulents that are recommended for households in the El Paso/Las Cruces area of Far West Texas and adjacent New Mexico. The general format includes the scientific name, one or more common names, and notations for the trees, shrubs, and perennials. Abbreviations in the notations column are informal and vary somewhat according to space; they include folg for foliage, fls for flowers, evrg and evrgn for evergreen, btflys for butterfly-attracting plants, and hmmbd for hummingbird-attracting plants. The last column indicates local availability at the time of writing: 1 = generally available from regional growers and retailers; 2 = sometimes available locally from specialty growers or from out-of-region growers; 3 = seldom, if ever, available commercially. An asterisk (*) indicates a plant that is native to El Paso County.

18)	<i>Hesperostipa (Stipa) neomexicana*</i>	Feathergrass	2

Recommended Southwestern Native Succulent/Semi-succulents for the El Paso/Las Cruces Area

Many of the following succulent or semi-succulent plants take considerable time to reach mature size. As a consequence, they are seldom nursery grown to large sizes and, unfortunately, mature specimens are most often collected in the wild to provide larger plants for landscaping purposes. **To avoid contributing to this practice, only nursery-grown stock, or plants verifiably salvaged from land development activities or recycled from other landscapes should be accepted when purchasing these plants.**
