

Non-survey Methods Of Assessment

Avoiding Survey Fatigue

Purpose

Learn at least three different methods of assessment other than surveys.

Learn the pros and cons of various assessment methods.

What is Assessment?

“Assessment is any effort to gather, analyze, and interpret evidence which describes institutional, departmental, divisional, or agency effectiveness...”

Why do we do assessments?

“...for the purpose of improving student learning and development.”

(Upcraft and Schuh, 2001)

Why is it important to do assessments in Student Affairs?

Improve
programs
and
services

Improve
student
learning

Strategic
Planning

Provide
evidence
of student
learning

What type of data do you need to tell your story?

Qualitative vs. Quantitative

Formative vs. Summative

Direct vs. Indirect

Qualitative vs. Quantitative

QUANTITATIVE

- Focuses on numbers/numeric values
- Information about quantities that can be measured and written down with numbers (ex: number of students who visit your office, attendance)

QUALITATIVE

- Focus on text/narrative from respondents
- looks for patterns in non-numerical data that is measured with our senses (sight, smell, touch, taste and hearing)
- Ability to capture “elusive” evidence of student learning and development

Formative vs. Summative

FORMATIVE

- Conducted **during** the training
- **Monitors** student learning
- Purpose is to provide feedback
- Use to shape, modify or improve the program in the moment

Examples:

Pop quiz

Show of hands

Instant student response system

SUMMATIVE

- Conducted **after** the training
- **Evaluates** student learning
- Makes judgement on quality, worth, or compares to standard
- Can be incorporated into future plans

Examples:

Final exam

Final Paper

Capstone portfolio

Exit interview

When the
cook
tastes the
soup, that's
formative;
when the guests
taste the soup,
that's summative.

— *Robert Stake*

Direct vs. Indirect

DIRECT

- Any process employed to gather data which requires students to **display/demonstrate** their knowledge, behavior, or thought processes
- Provides evidence of student learning

Examples:

Test/quizzes, papers, presentations

INDIRECT

- Any process employed to gather data which asks students to **reflect** upon their knowledge, behaviors, or thought processes
- Provides evidence of students' attitudes, perceptions, and experiences

Examples:

Satisfaction surveys, reflections, focus groups

The background is a solid orange color. On the right side, there are several dark brown gears of different sizes, some overlapping. A bright yellow square is positioned in the upper right corner, partially overlapping one of the gears.

What's the most common
type of assessment?

SURVEY FATIGUE?

The background is a solid orange color. On the right side, there is a decorative graphic consisting of several interlocking gears of different sizes and a yellow square. The gears are dark brown, and the square is a bright yellow. The text is centered on the left side of the slide.

Other forms of Assessment Methods

Student Response Systems

Interactive response systems using electronic devices such as smartphones or computers that offer instructors real-time feedback from their audiences.

Kah??t!

Student Response Systems

Pros

- Formative
- Fast
- Fun
- Immediate feedback

Cons

- May have a cost
- Short - no specific data available
- Plan logistics ahead and factor time into your presentation

Interviews

interview

Interviews

Pros 

Cons 

?

?

Interviews

Pros 

- Can gather rich data
- Is Flexible - can be in person, via phone, or videoconference

Cons 

- Can be expensive
- Can be time-consuming
- Need to plan ahead

Rubrics

Communicates expectations

Provides both qualitative and quantitative information

Allows for timely and detailed feedback

- Can evaluate multiple achievement levels
- Can measure communication skills, performance
- Defines performance, achievement levels
- Gathers rich data
- Allows many to measure the same way

Rubrics

Pros

- States expectations and standards
- Can be used for learning
- Provides for consistency in rating/grading
- Provides both individual and program-level feedback

Cons

- Developing a rubric takes time
- Training of raters is needed to look for specifics

Observation

Pros

- Allows for direct and immediate feedback
- Can include a variety of observers (faculty, students, business representatives, community members)

Cons

- Need to develop a scoring guide and allow time for scoring
- Can be difficult to get observers/volunteers

Portfolios

Portfolios include a collection of learning: reflections, photos, videos, podcasts, written work, other.

Portfolios

Pros

- Allows you to assess a student's learning and development over a long period of time
- Allows you to assess a student's growth on a certain skill (ex. writing skill)
- Provides a comprehensive overview of student achievement (assess various components)

Cons

- Must provide clear guidelines and expectations
- Takes planning to develop and assess content
- Time-consuming to assess many portfolios
- As the assessor, you must be organized
- Archiving and storing materials

Other Methods - Which one is right for you?

Tests, exams, quizzes

Focus Groups

Word Clouds

Reflections/Journals

Self-assessment

Review existing data

Posters/Presentations

Checklists

Take time to reflect...

- What do you want/need to show?
- Why do you need to show it?
- Who is the source of your data?
- How will you use the data?
- Who will need to see results?

Considerations for Choosing Data Collection Methods...

- Key questions
- Assessment person/team skills
- Resources
- Timelines
- Stakeholders preferred types of data
- Instrument validity
- Reliability
- Objectivity
- Cultural considerations

Tips from the experts

Do you
have
learning
outcomes?

- Keep it simple
- Start with your learning outcomes
- Ask if the data already exists
- Start with the ideal design for your assessment, then work backwards to what is possible
- Get feedback from colleagues and CampusLabs
