

## WHAT IS RESPONDUS LOCKDOWN AND MONITOR?

**Respond us LockDown Browser** is a test taking browser that prevents you from printing, copying, going to another URL, or accessing other applications during a test.

**Respondus Monitor**, when enabled, requires students to use a webcam and microphone with LockDown Browser. As soon as the exam is complete, the instructor can view the recordings from the student's test session.

*! If a Blackboard test requires Respond us LockDown Browser, students will not be able to take the test with a standard web browser. This should only be used for taking Blackboard tests .*

## SET UP A TEST

After a test has been deployed setup Respondus LockDown Browser by following the steps below.

### STEP 1:

Click **Course Tools** on left column. Then click **Respondus LockDown Browser**.

### STEP 2:

To enable LockDown Browser for a test, click on the gray box next to the Test, then select **Modify Settings**.

### STEP 3:

Select **Require Respondus LockDown Browser** for this exam.

## STEP 4:

To enable Respondus Monitor, select **Require Respond us Monitor** for this exam. Choose what items students need before beginning exam.

## STEP 5:

Click "Save and Close".

## REVIEW MONITOR VIDEOS

In the tool area described in the previous section, follow the steps below.

## STEP 1:

Click on the gray box next to the Test and select **Video Review**.

## STEP 2:

Click on the [ + ] to expand the section for a student
