iClicker Cloud Polling Question Types

iClicker Cloud allows instructors to choose between 4 types of questions:

- Multiple Choice
- Short Answer
- Numeric
- Target Questions

**Multiple Choice**

Students are able to select a single letter response A-E. While students can only select one response, you can select multiple responses as correct when grading.
Short Answer allows you to pose open-ended questions. Students can respond with up to 140 characters, including punctuation and most symbols.

- In the **Results** window, identical responses are grouped together (grouping is not case-sensitive). **STAR** a response to indicate the "best response" or add a response that was not submitted by any student in the **OTHER** field.
- You can also choose to view submitted answers as a Word Cloud.
Numeric

- Numeric type are open-ended questions that are just numeric values.
- Responses can include up to 8 digits plus decimal point.
- Numeric response supports scientific notation and exponents.
- Entries are bucketed by value—for example, 5000, 5000.00, and 5E3 would group together.

Target Questions

This question type allows instructors to ask questions simply by sending an image to students. Students answer the questions by clicking, or tapping, the correct location on the image using their laptops or smart devices.
Anonymous Polling

You can ask any of the question types in “Anonymous mode.” This allows you to ask sensitive questions that students might not feel comfortable answering if their response could be traced to their identity. **Anonymous questions are not Gradable.** To switch your toolbar to anonymous mode, select anonymous polling from the menu. This will change the polling toolbar to a dark gray color to indicate you are in anonymous mode. **Your polls will remain in anonymous mode until you switch your toolbar back to regular polling.**
